Research context

How did manufacturing and production systems evolve during the time and what are their current needs?

Research context

Production systems are increasingly facing the challenges of dealing with **uncertainties and unforeseen disruptive events**, which can significantly affect their overall performance

Production system' capability to master their business in a turbulent world is critical to ensure its **sustainable competitiveness** and **efficiently react to these unexpected events**

In order to prepare for this new challenge, companies and networks of companies must exploit the transformative capabilities of **Digitalization and Automatization**

Research context

Production systems are key part of the value chain

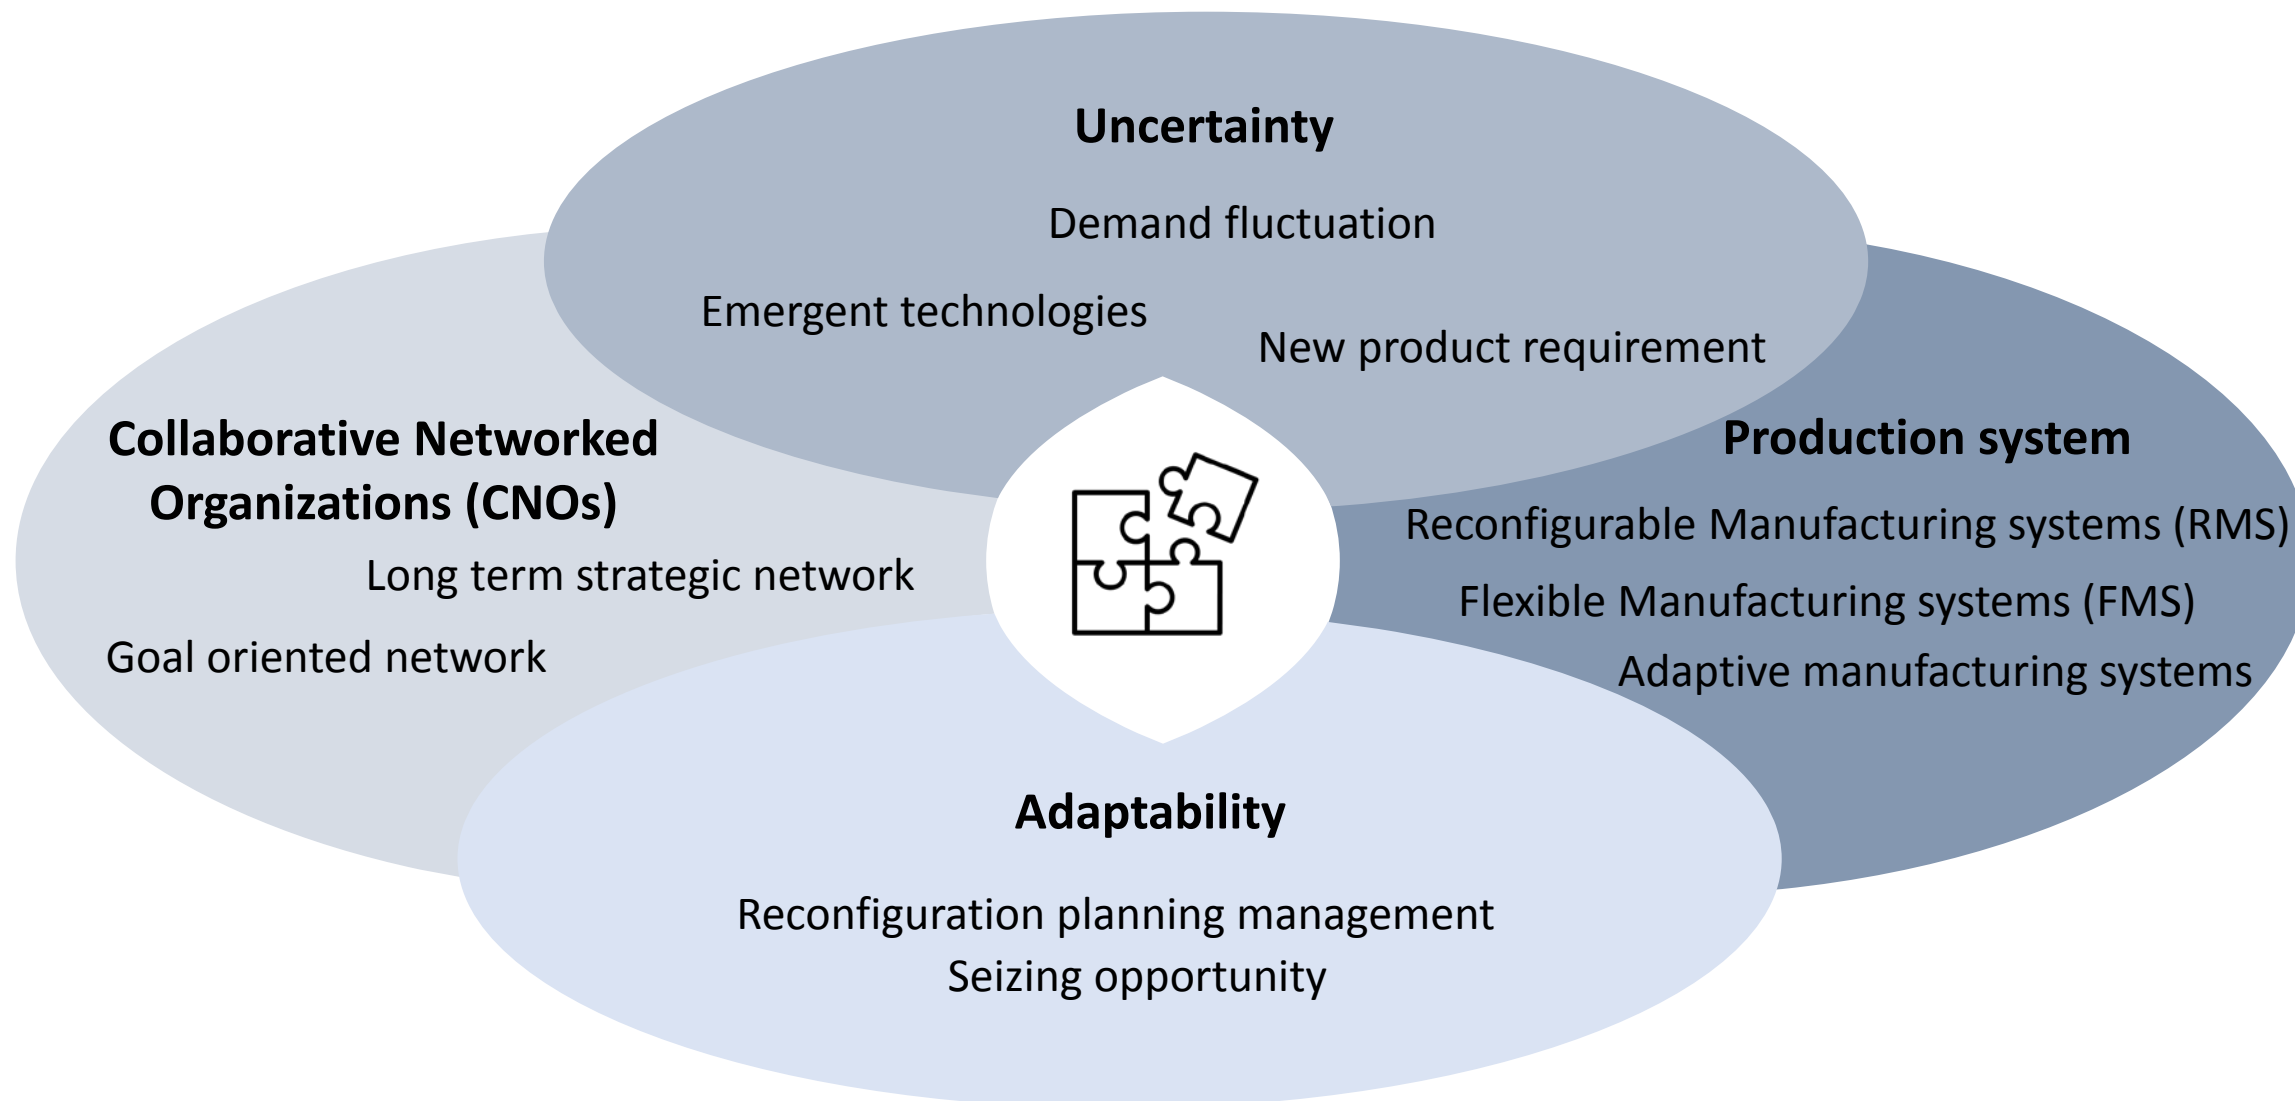

They have to cope with risks and opportunities as uncertainty is the new normal

Among those events, management of **new product** opportunities is crucial

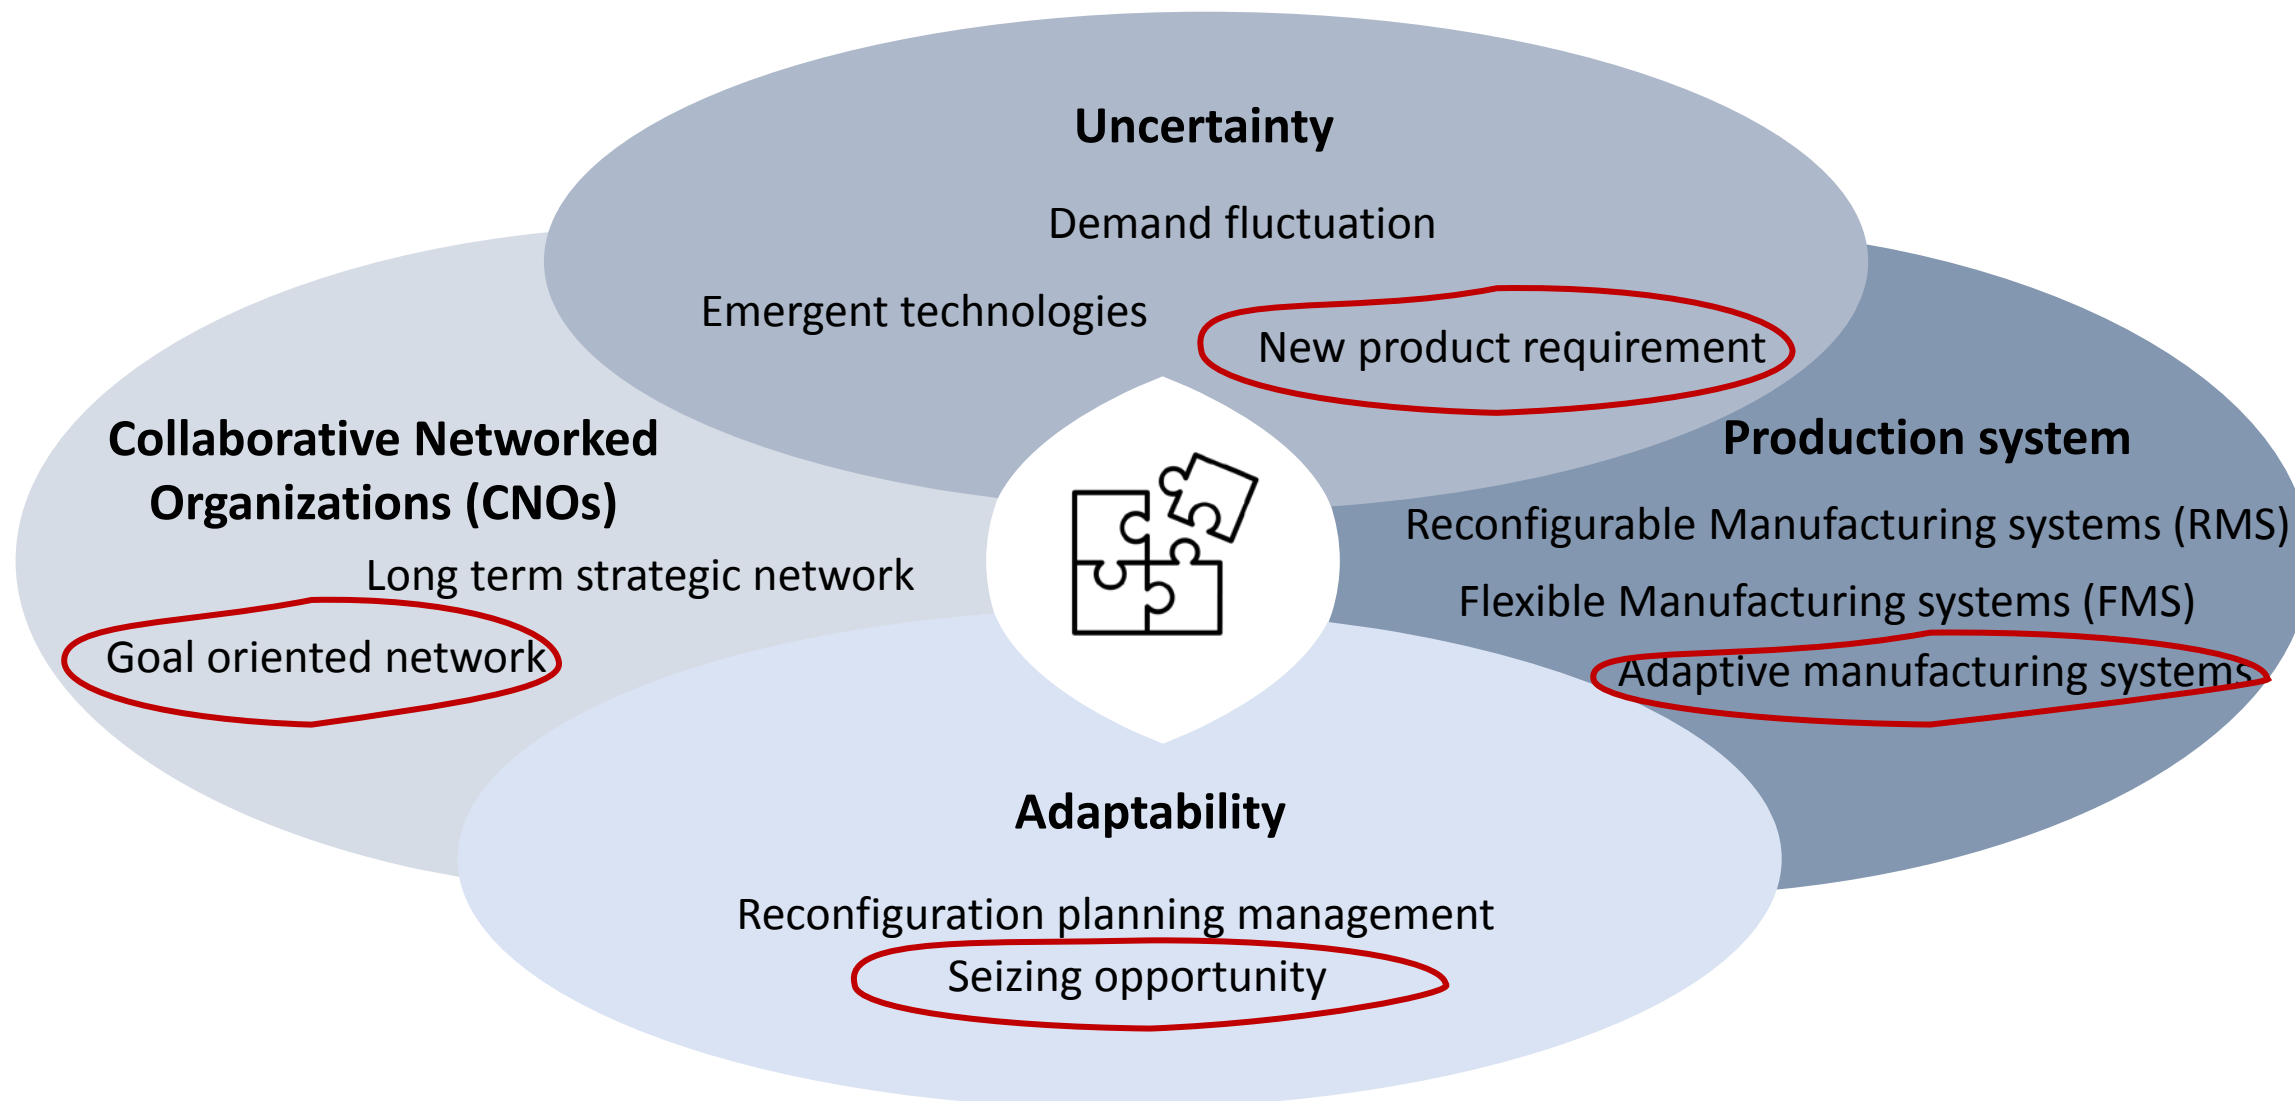

New product: The manufacturing process of the product is unknown by the concerned production system but known by the market.

Research context – Literature review

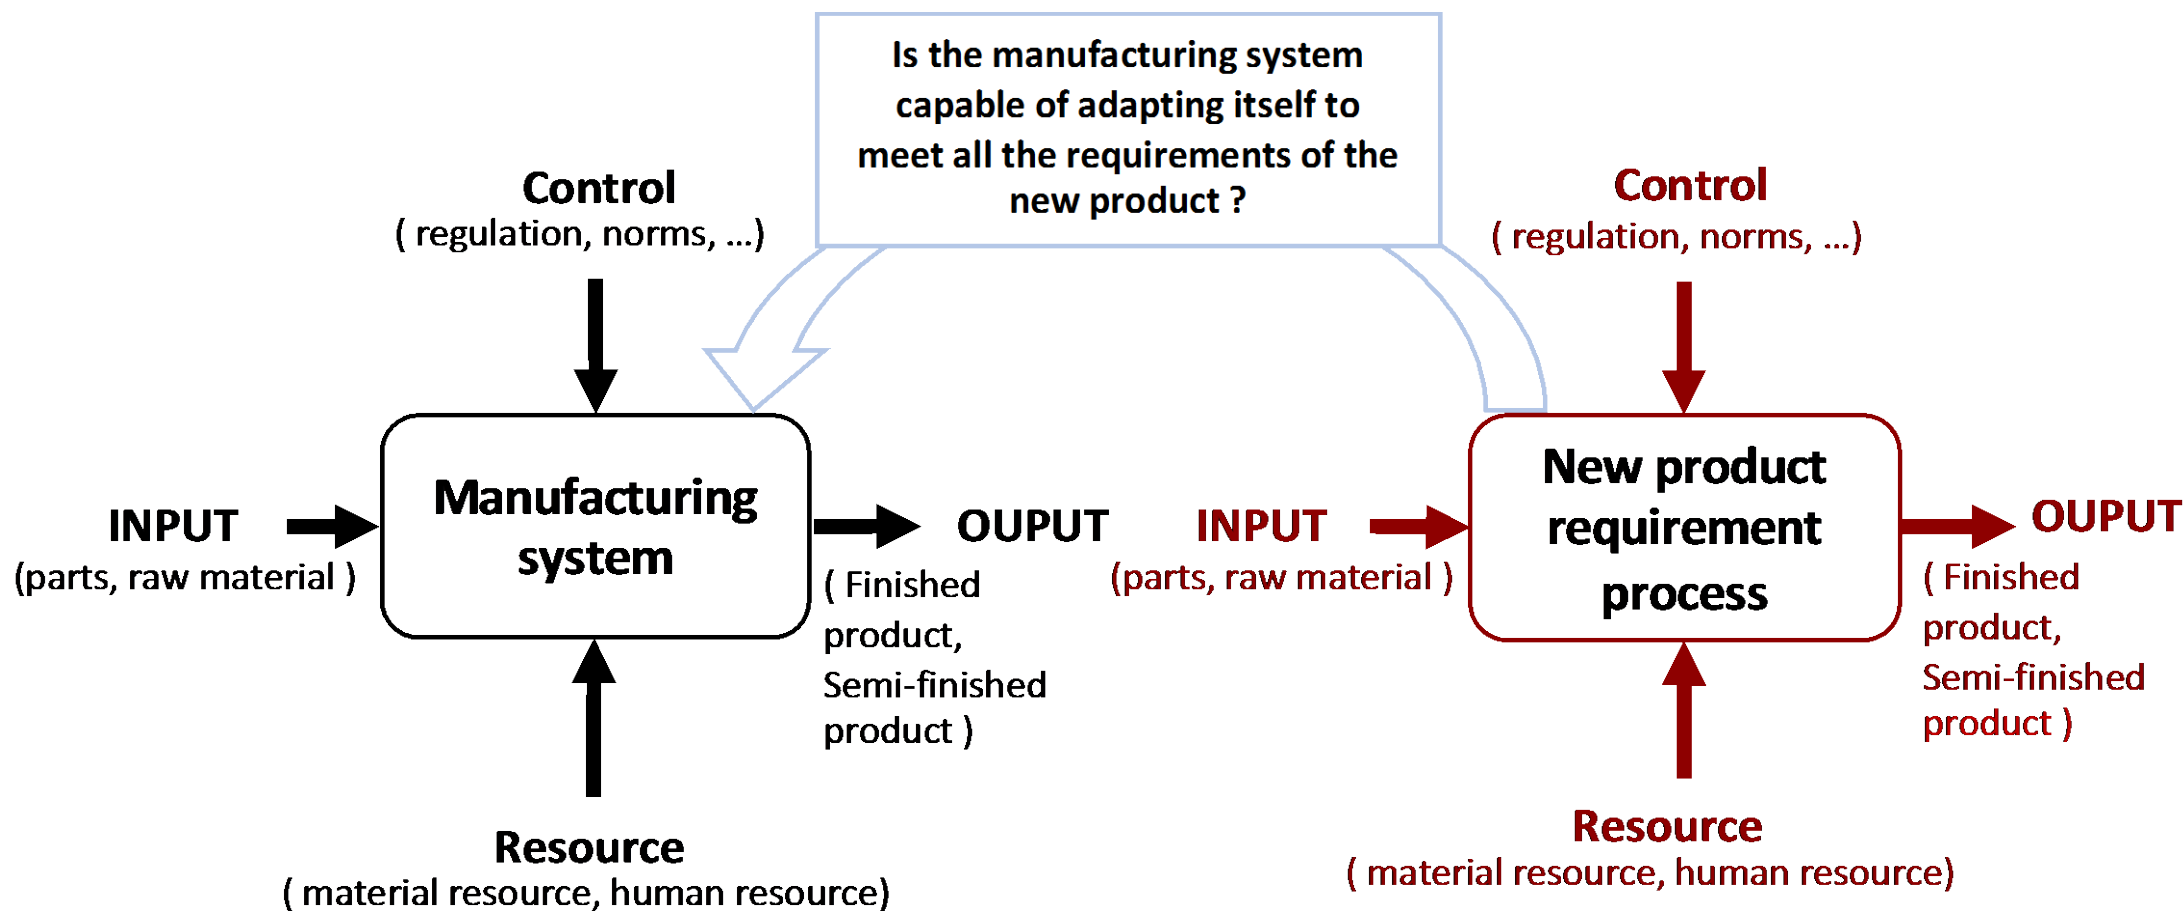

Research context – Literature review

Problem statement

What is the adaptability potential of a production system in relation to the manufacture of a new product?

Research questions

RQ1: What concepts and characteristics should be considered to automatically analyze the adaptability potential of a production system to support a new product opportunity?

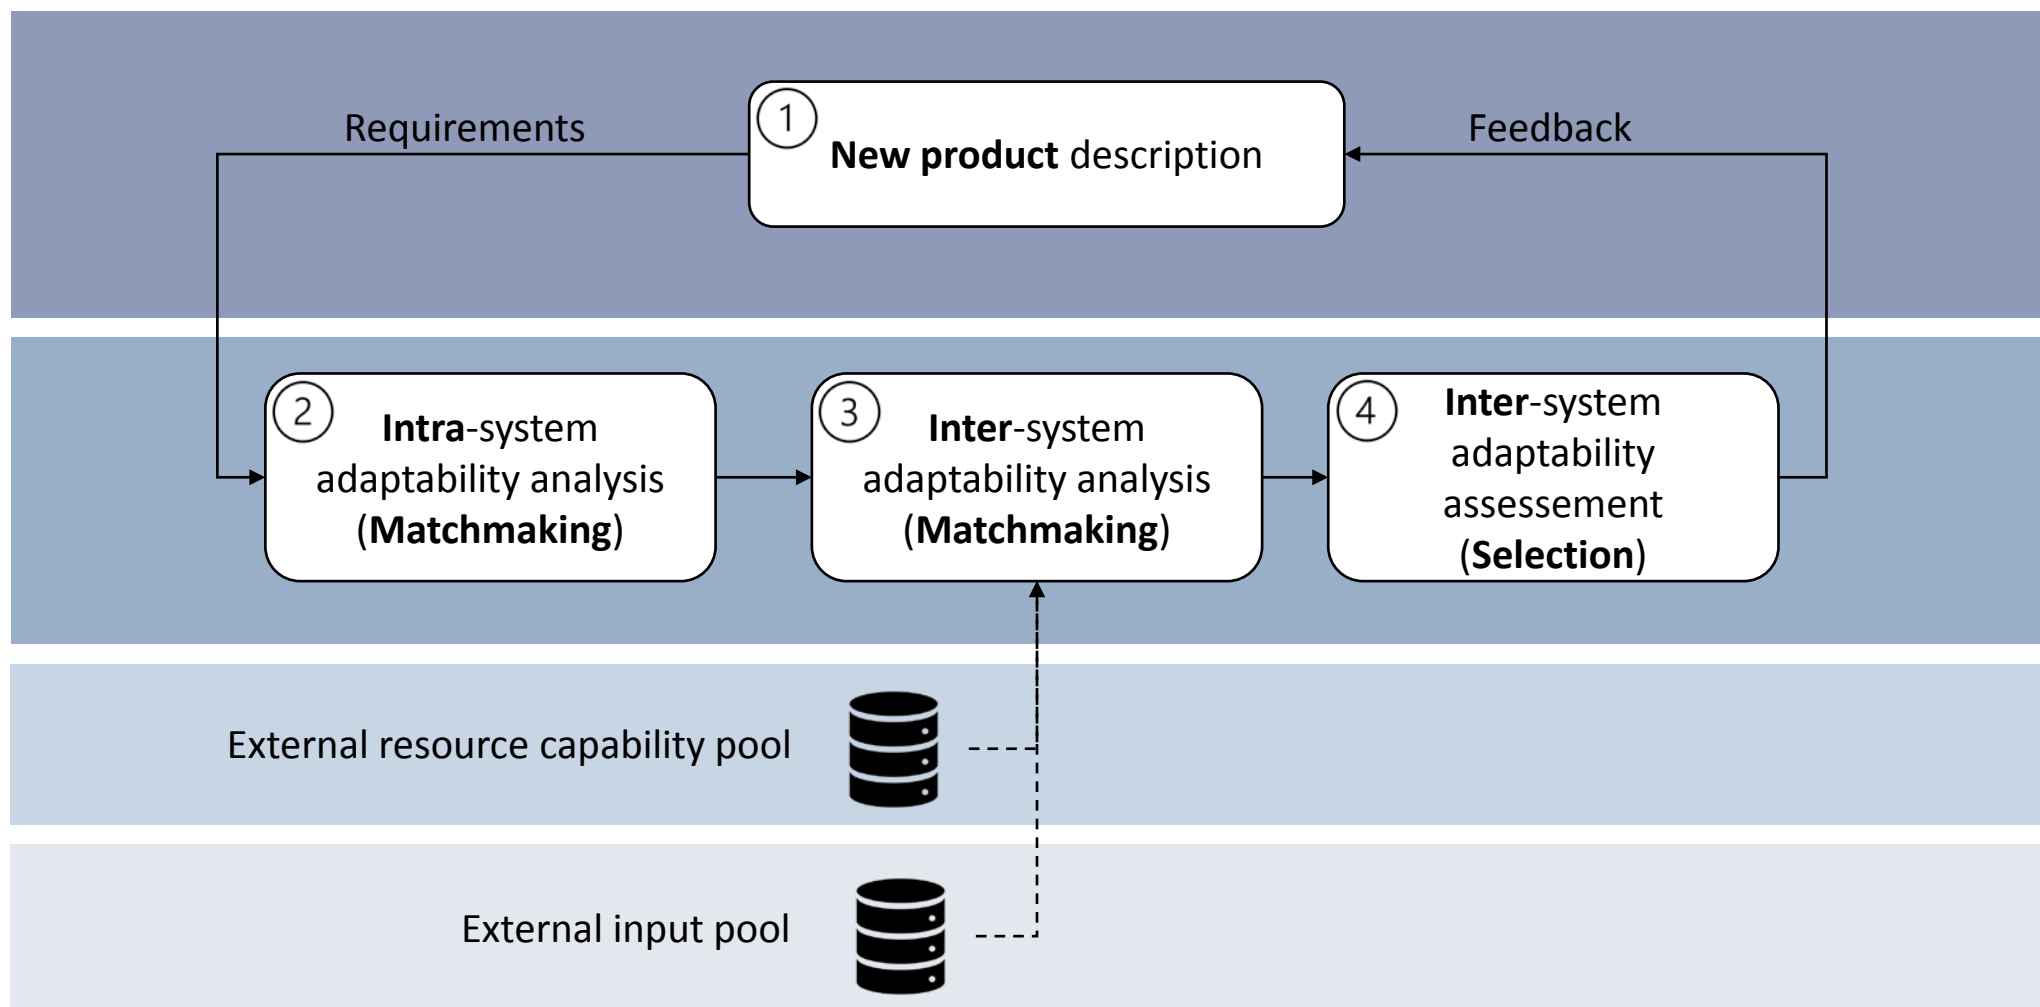

RQ2: How can we automatically assess the adaptability within the manufacturing system itself (intra-adaptation)?

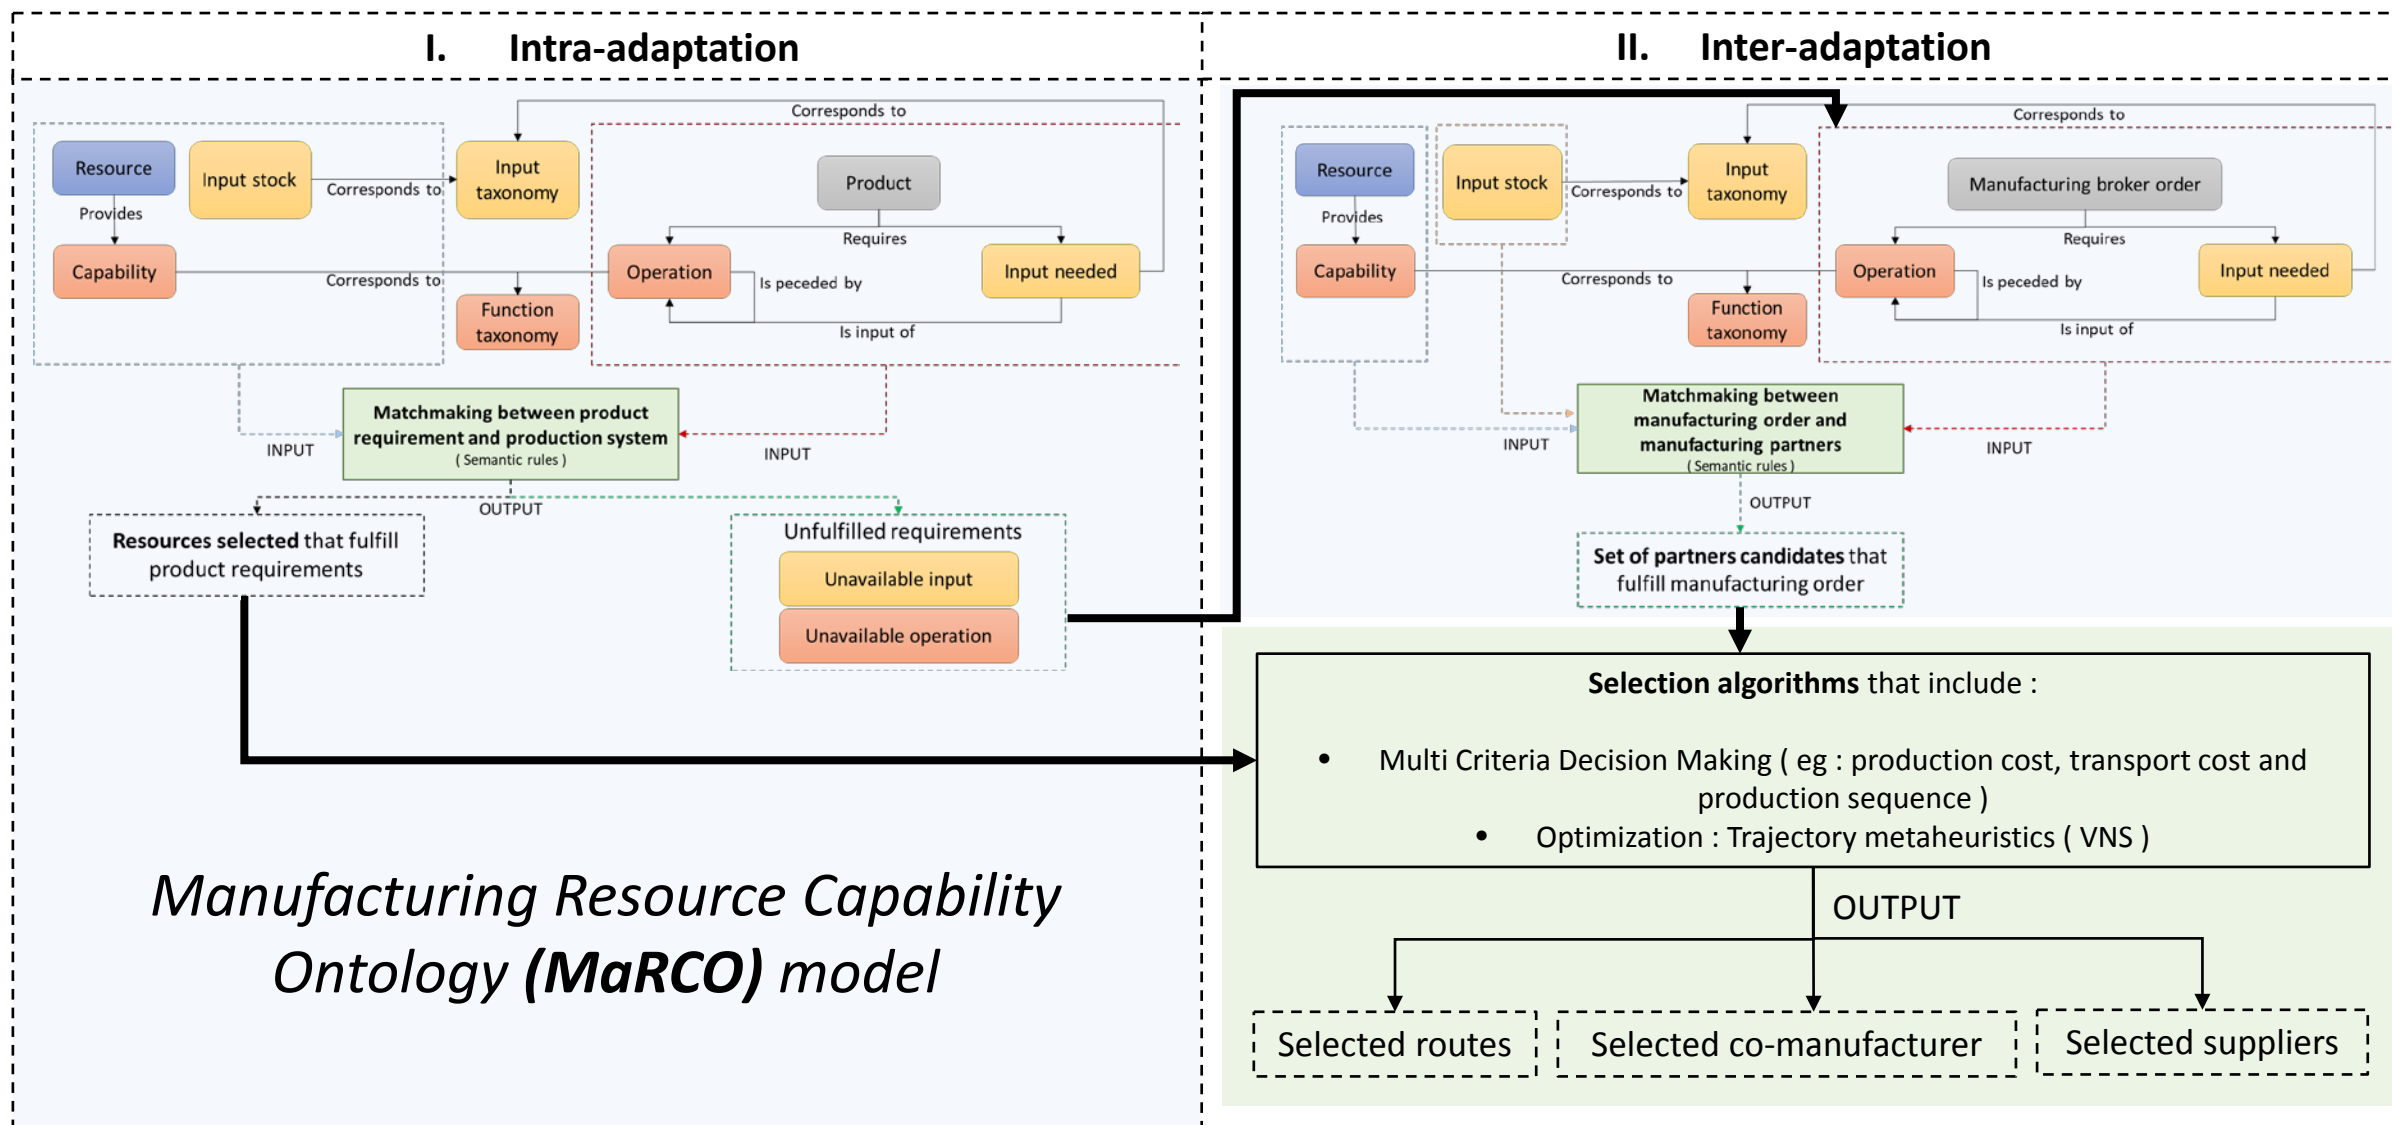

RQ3: How to identify on-the-fly complementary capabilities in a network of partners to complete the unfulfilled requirements within the manufacturing system (inter-adaptation)?

Research framework

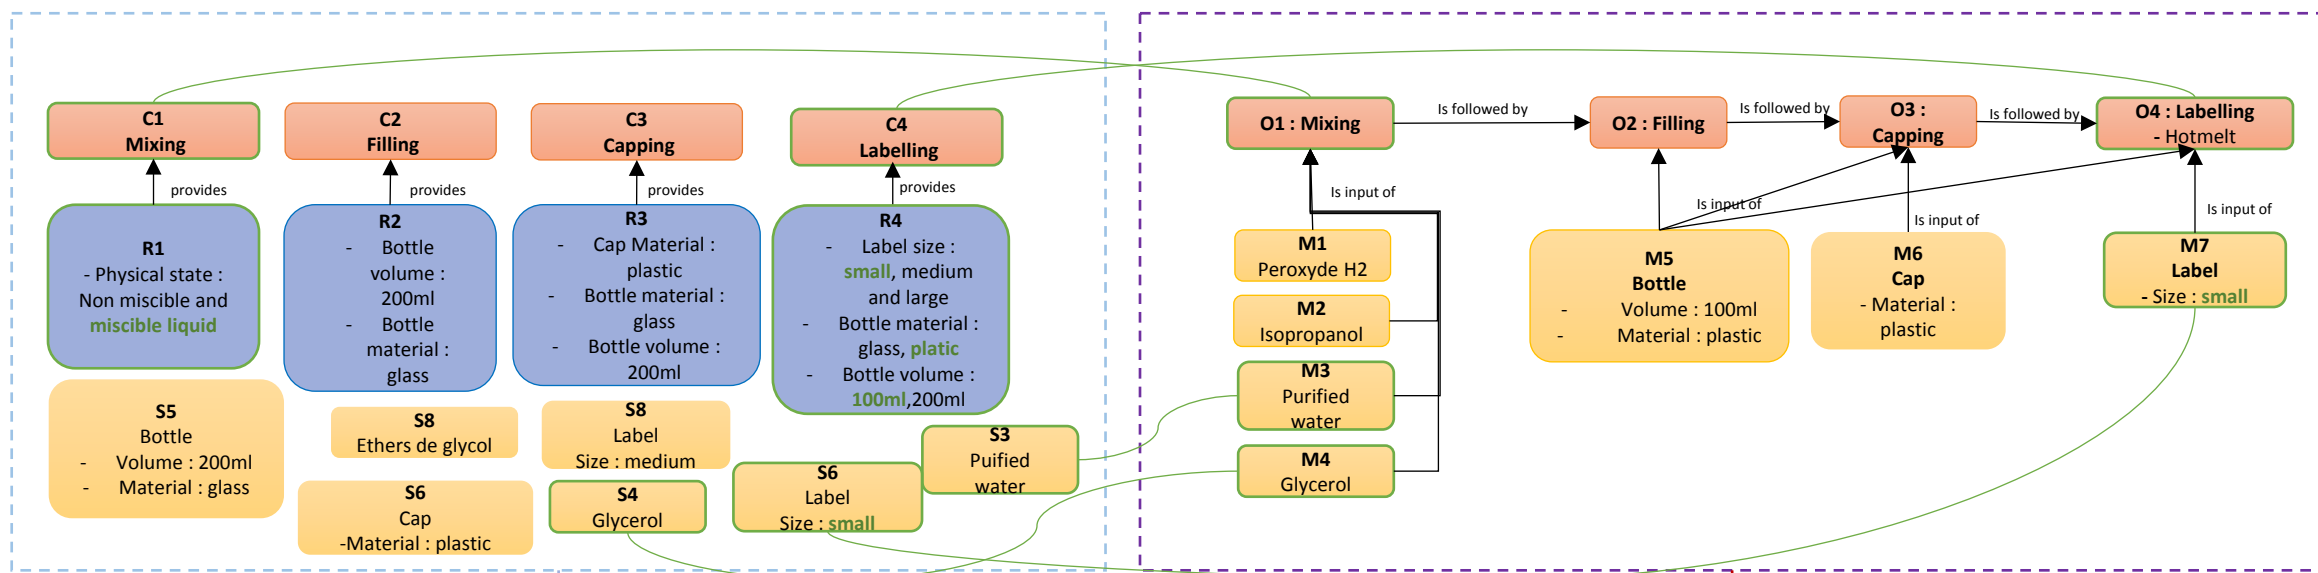

Research framework

Identification Evaluation Product requirement

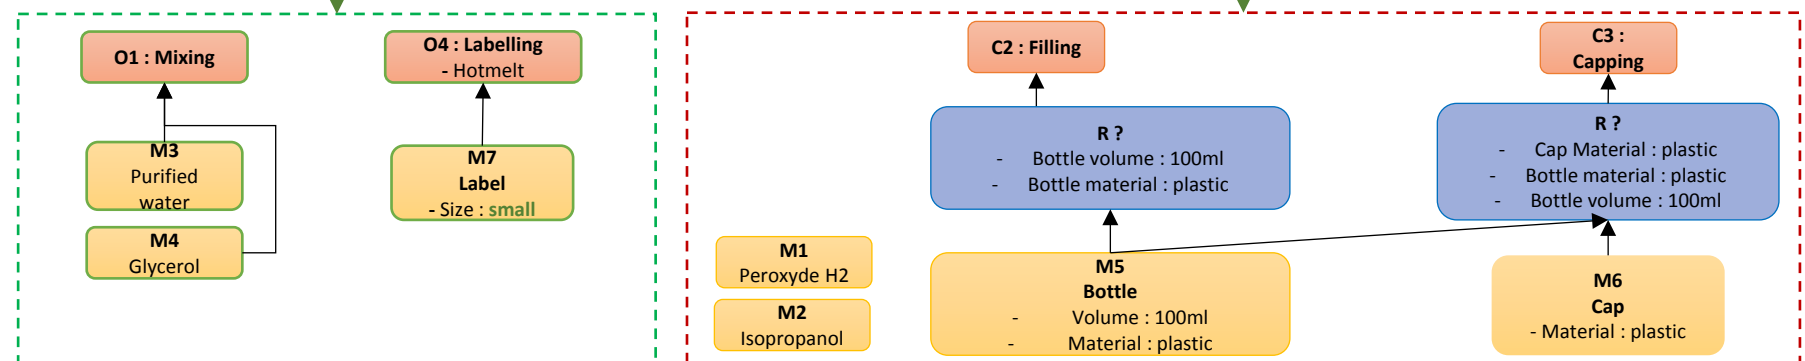

Use case : An intra-analysis of the adaptation of a shampoo production system to manufacture a hydroalcoholic gel requirement due to a pandemic disruption

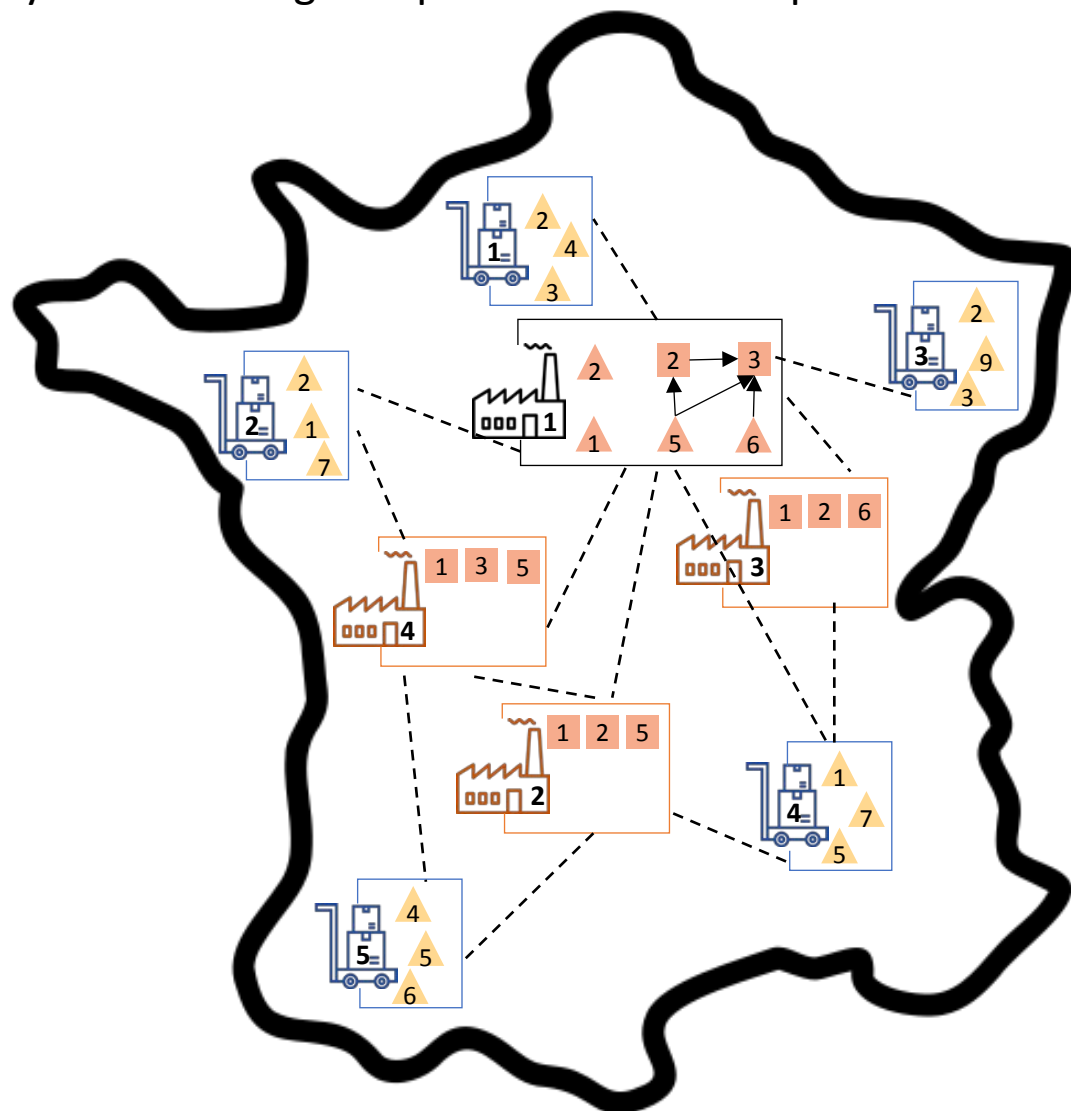

2 Intra-system adaptability analysis (Matchmaking)

- **Matching between resource capability and operation requirement :** If the the operation and the capability has the same name and the properties of the inputs corresponding to this operation are included in the corresponding resource → Match between C and O
- **Matching between stock and I/O requirement :** If the input and the stock have the same name → Match between S and M

1 New product description

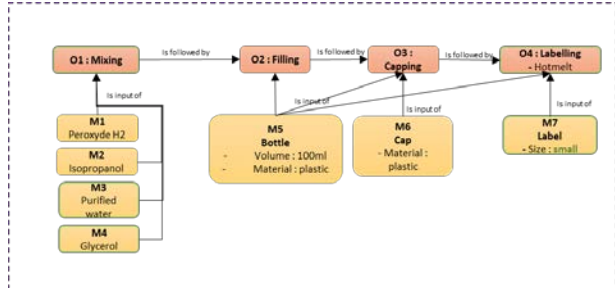

Use case : An inter-analysis of the adaptation of a shampoo production system to manufacture a hydroalcoholic gel requirement due to a pandemic disruption

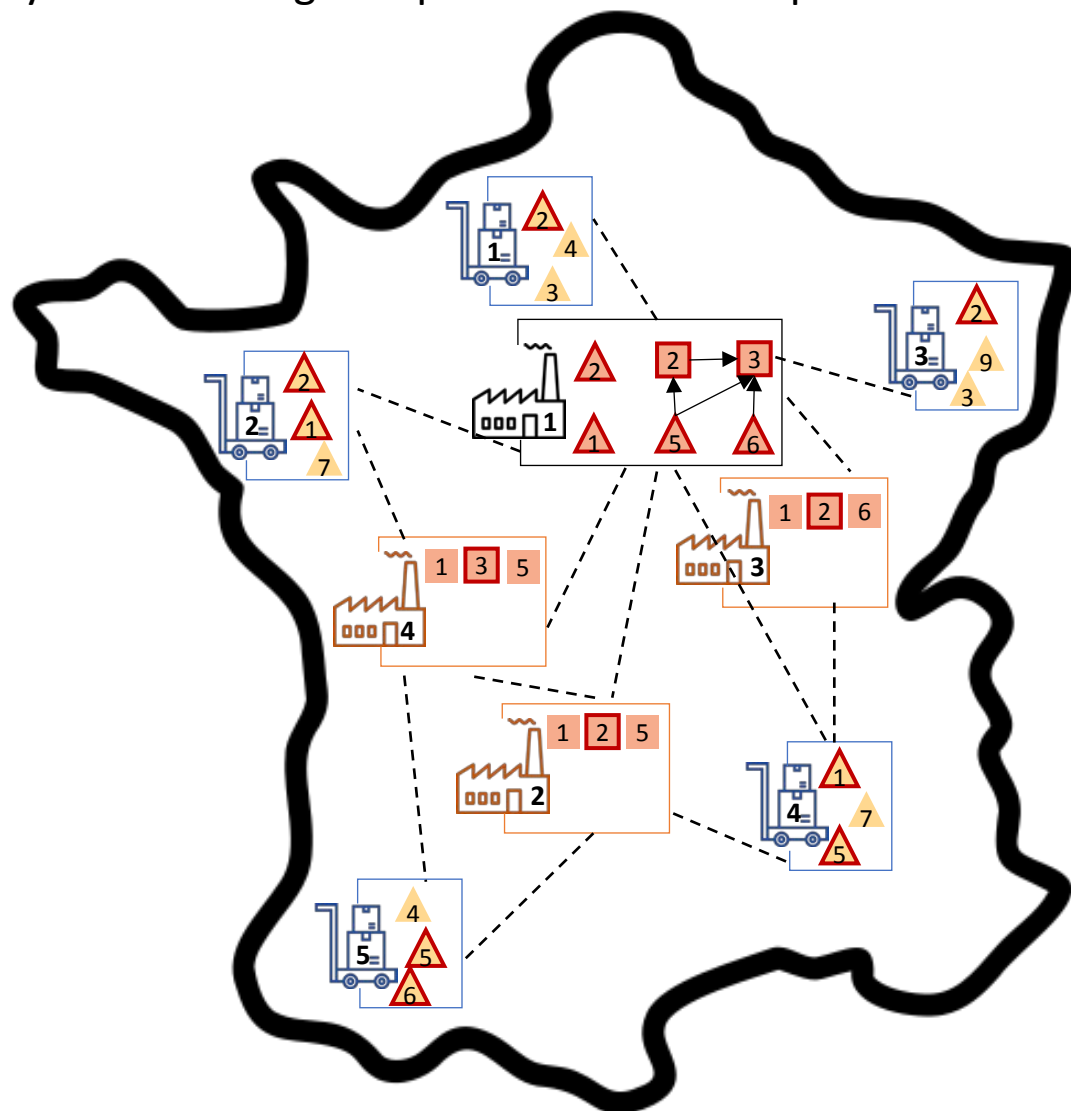

3 Inter-system adaptability analysis (Matchmaking)

Identify all the candidates that have suitable resources within the set of manufacturing partners and suitable inputs within the set of suppliers

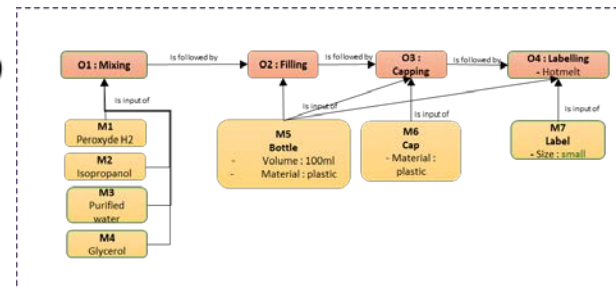

- ▲ Input requirement ■ Operation requirement ▲ Matched input stock ■ Matched Capability ▲ Matched input requirement ■ Matched operation requirement
- ▲ Input stock ■ Capability ■ Manufacturing partner ■ Targeted production system ■ Supplier - - - - Possible route

Use case : An inter-analysis of the adaptation of a shampoo production system to manufacture a hydroalcoholic gel requirement due to a pandemic disruption

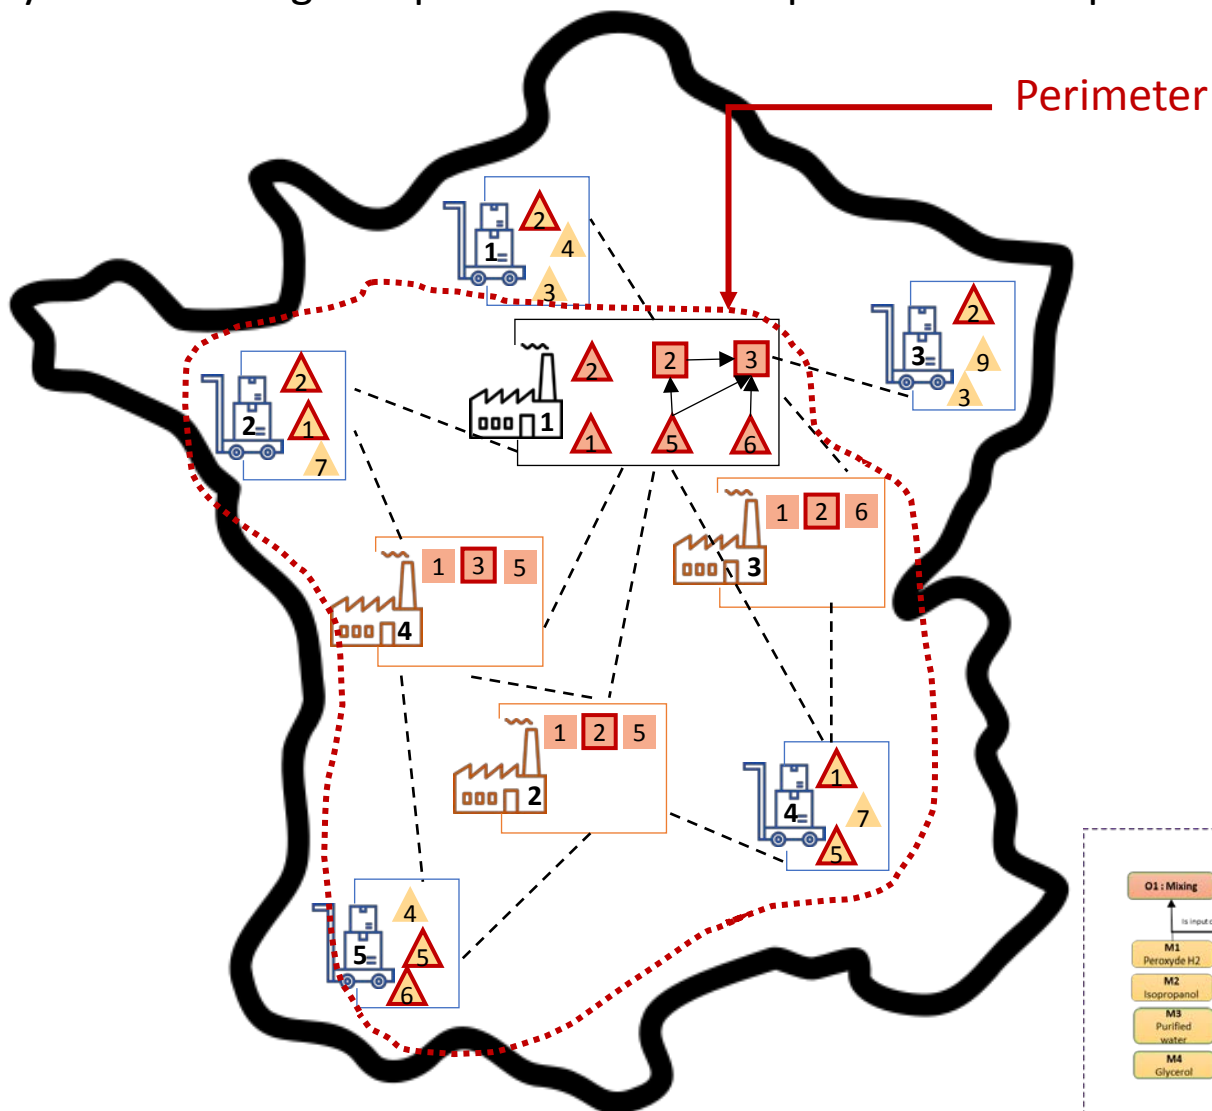

3 Inter-system adaptability analysis (Matchmaking)

Identify all the candidates that have suitable resources within the set of manufacturing partners and suitable inputs within the set of suppliers

- ▲ Input requirement ■ Operation requirement ▲ Matched input stock ■ Matched Capability ▲ Matched input requirement ■ Matched operation requirement
- ▲ Input stock ■ Capability ■ Manufacturing partner ■ Targeted production system ■ Supplier - - - - Possible route

Use case : An inter-analysis of the adaptation of a shampoo production system to manufacture a hydroalcoholic gel requirement due to a pandemic disruption

4 **Inter-system adaptability assessment (Selection)**

Filter all the candidates that have been identified previously within a **collaborative network perimeter**

- ▲ Input requirement ■ Operation requirement ▲ Matched input stock ■ Matched Capability ▲ Matched input requirement ■ Matched operation requirement
- ▲ Input stock ■ Capability ■ Manufacturing partner ■ Targeted production system ■ Supplier - - - - Possible route

Use case : An inter-analysis of the adaptation of a shampoo production system to manufacture a hydroalcoholic gel requirement due to a pandemic disruption

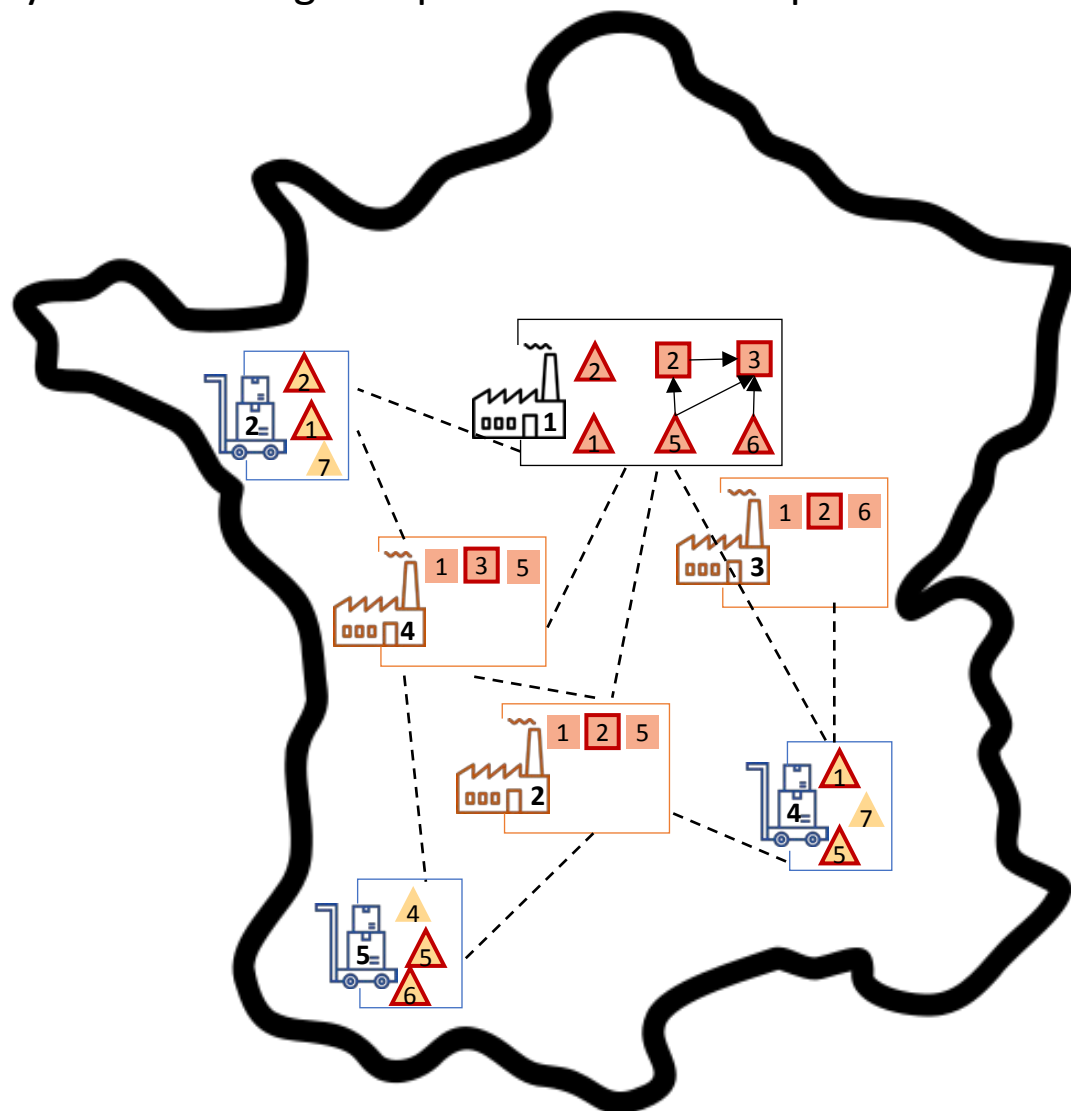

4 **Inter-system adaptability assessment (Selection)**

Filter all the candidates that have been identified previously within a network of manufacturing partners and suppliers

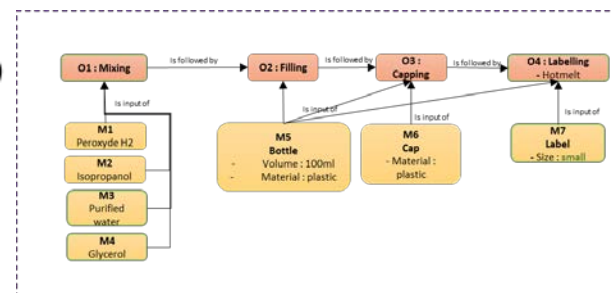

- ▲ Input requirement ■ Operation requirement ▲ Matched input stock □ Matched Capability ▲ Matched input requirement ■ Matched operation requirement
- ▲ Input stock ■ Capability ■ Manufacturing partner ■ Targeted production system ■ Supplier - - - - Possible route

Use case : An inter-analysis of the adaptation of a shampoo production system to manufacture a hydroalcoholic gel requirement due to a pandemic disruption

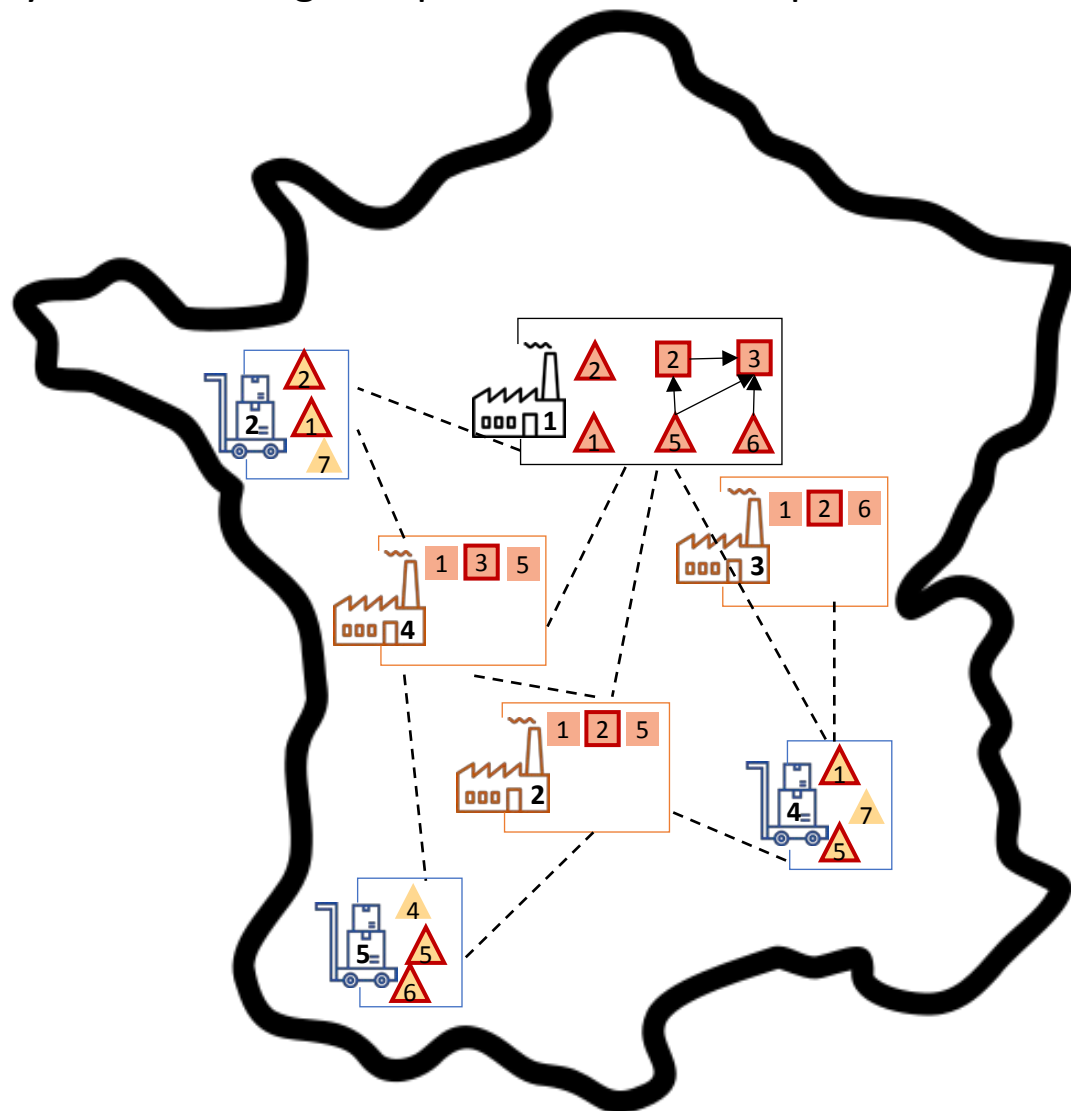

4 **Inter-system adaptability assessment (Selection)**

Criteria specified by the targeted manufacturing system (cost, distance....)

- ▲ Input requirement ■ Operation requirement ▲ Matched input stock ■ Matched Capability ▲ Matched input requirement ■ Matched operation requirement
- ▲ Input stock ■ Capability ■ Manufacturing partner ■ Targeted production system ■ Supplier - - - - - Possible route

Use case : An inter-analysis of the adaptation of a shampoo production system to manufacture a hydroalcoholic gel requirement due to a pandemic disruption

4 **Inter-system adaptability assessment (Selection)**

Use a **multi-criteria selective algorithm** that allows consolidation and coordination of the network

- ▲ Input requirement ■ Operation requirement ▲ Matched input stock ■ Matched Capability ▲ Matched input requirement ■ Matched operation requirement
- ▲ Input stock ■ Capability ■ Manufacturing partner ■ Targeted production system ■ Supplier - - - - - Possible route

Conclusion

We have provided a framework that analyzes the adaptability potential of a networked targeted manufacturing system for a new product requirement.

RQ1 : What concepts and characteristics should be considered to automatically analyze the adaptability potential of a production system to support a new product opportunity?

Capability based ontology
(MaRCO model)

RQ2 : How can we automatically assess the adaptability within the manufacturing system itself

Matchmaking (intra-system)

RQ3 : How to identify on-the-fly complementary capabilities in a network of partners to complete the unfulfilled requirements within the manufacturing system?

Matchmaking
(inter-system)

Evaluation

Next steps

-  Find adequate selection algorithms for the evaluation part
-  Implement ontology and its semantic rules
-  Use case - Simulation

Thank you for your attention !
